

Introducing the Virtual Clinic

Clinical Partnership in partnership with the World Health Net platform allows you to respond to national guidance on dealing with the coronavirus pandemic, by introducing virtual clinics and consultations that reduce the risks with unnecessary travel and contact between clinicians and patients.

When you deploy our healthcare partnership platform, you can help your organisation to prepare for recovery and restart following the covid lockdown. You will have:

- Provide an innovative approach to your service or practice
- A platform built by clinicians with you in mind
- A solution that will save money and cut travel time
- Keep your patient and your staff safe with social distancing
- Prevent avoidable and inappropriate referrals to secondary care
- Reducing waiting times to see a GP or a specialist
